

Usability Task Sheet

Try CodeSage, then tell us how it felt to use.

CodeSage checks Java projects on GitHub for technical debt. It scans the code, gives each project a health score, and ranks the problems worth fixing first. This session helps us measure how easy the product is to learn and use.

Website	codesageai.dev
Survey	The Google Form link is sent with this sheet
Time needed	About 10 minutes for the tasks and 5 minutes for the survey
You need	A laptop or desktop browser and an email address you can open

Before you start

- Use a laptop or desktop browser such as Chrome, Edge or Firefox.
- Create your own account. You get a private workspace, so nothing you do affects anyone else.
- Do the tasks in order. If one gets stuck, skip it and move on. We are testing the product, not you.
- Try not to ask anyone for help. If something is confusing, remember it for the survey.

Your tasks

The tasks follow the same order as the guided trial.

GET STARTED

- | | | |
|-----------|---|--|
| 01 | Create your account
Open codesageai.dev and sign in. On the sign-in page, register with your email address and confirm it from your inbox. | Done when
You are signed in and see the Workspace page. |
| 02 | Take the guided trial
A short guided trial opens by itself. Follow it with Next until it ends. You can skip a part if you already understand it. | Done when
The trial has closed. |

WORKSPACE AND PROJECTS

- | | | |
|-----------|--|---|
| 03 | Rename your workspace
On the Workspace page, change the name My Workspace to something of your own, for example John's Workspace, and save. | Done when
The new name shows in the workspace selector at the top. |
| 04 | Add a Java repository
Open Projects and connect a public repository which contains java source code files. A sample project is given below; you can copy paste it.
https://github.com/JodaOrg/joda-time | Done when
The repository appears in your project list. |

DASHBOARD

- | | |
|--|---|
| 05 Scan the added repository
Open the dashboard with Go to Dashboard button. Keep the main branch selected and start a scan. Wait for it to finish. | Done when
The dashboard loads with Code Health card/Trend, Findings and file tree. |
| 06 Find the most urgent finding
Filter the findings list by severity and identify the finding with highest severity score. Switch the view to Findings + detail and open findings and its details. | Done when
You can see which files have findings in it. |

PROFILES AND HISTORY

- | | |
|---|---|
| 07 Change the scoring profile
Open Profiles , choose Security-first and set it as the workspace default. Go back to the dashboard and look at the score again. | Done when
Profiles show Security-first as the workspace default. |
| 08 Open a saved scan
Use side menu Scan History tab to open your scan from the list. Then return to the latest result. | Done when
You are back on the latest scan. |

HELP AND FINISH

- | | |
|---|---|
| 09 Look something up
Open Support in the side menu, then Product Guide . Find detailed guide on how product works. | Done when
You know how to interpret dashboard results. |
| 10 Change the theme and sign out
Use Theme at the bottom of the side menu to switch between light and dark. Then select Sign out . | Done when
You are signed out. |

When you finish

Open the survey form and answer the questions. It takes about 5 minutes. Tick the tasks you finished and give your first honest reaction. There are no right or wrong answers.

Something not working?

If you cannot sign in or the site shows an error, contact us:
